05. Coding Standards

Last updated by | Warren Duffin | Jun 7, 2023 at 7:31 PM GMT+5:30

Java Coding Standards

Rather than re-invent the wheel the existing Calyx CTMS Coding Standards will be used for the development of the Automation Modules.

These Coding Standards can be found in the development manual (html / pdf) and are maintained within the main Calyx CTMS project.

Version Control

All code must be checked into version control, prior to the completion of a User Story.

We use Azure Devops (git) as our source control repository.

When checking in to Git, ensure that the commit messages follows current formatting standards and a reasonable but short comment explaining the changes made. For example:

```
CAL-F12345-US43523 Fixed display of foo by barring the baz
```
